

Our Mission and Vision Statements

Mission Statement

Our mission is to serve the local community in providing cultural opportunities in science, while also meeting the needs of seasonal tourism. We are committed to building and maintaining a world-class dinosaur fossil collection to support in-house research, exhibits, and education.

Vision Statement

Our vision is to provide a unique museum experience driven by in-house research and newly discovered fossils. We aim to create a community hub for science, inspiring local residents to become actively involved in our laboratory and exhibits, as well as offering a vibrant and varied events program. Our specimen collection will be continually built through fieldwork by museum staff, supporting a world-class research program and unique exhibits based on new research.
